

Gutter Guard[™]

Aluminum Perforated Gutter Cover

This efficient and easy-to-install aluminum gutter protector fits neatly into the gutter and securely attaches to the front using the included stainless steel screws. Featuring numerous perforations, it facilitates rainwater flow through the channels, ensuring optimal airflow for drying and dispersing debris. It's available in white, mill finish, and black, which promotes faster ice melting. Additionally, it includes a Lifetime Limited Warranty.

Features

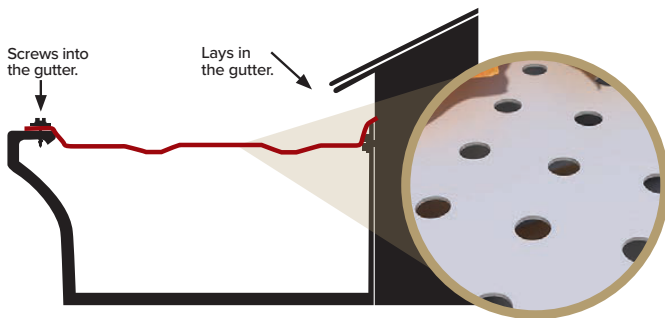

- Highest debris capacity
- Secure front fastening with screws
- Handles the most significant water volume
- Features channels for effortless airflow, aiding debris drying and removal
- Sturdy, perforated .019 aluminum with a painted finish
- No disruption to shingles during installation

Easy to Install:

Position the Aluminum Perforated Gutter Cover within the gutter and fasten it securely to the front gutter hem. The Perforated Cover offers two alternative installation methods:

1. Once the cover is affixed to the front gutter hem, the installer has the option to use screws through the cover into each hanger. This minimizes the risk of potential damage to the gutter hem or hanger caused by heavy snow or ice.
2. Alternatively, the installer can employ 1.5-inch screws through the openings in the rear vertical wall of the gutter cover to attach it to the fascia.

Similar to all gutter protection solutions, the need for maintenance may arise periodically, contingent on the type and volume of debris, typically involving brushing off the top of the panels.
